

PRACTICAL NO-11

To compare AI-generated content with student-created content and understand limitations of AI.

Aim: To compare AI-generated content with student-created content and understand limitations of AI.

- a) Write a 100–150 word paragraph on the topic:
“Will AI replace jobs or change them?” (This must be written by the student.)
- b) Ask any AI tool (ChatGPT/Gemini/Copilot) to write the same topic.
- c) In your practical copy, create a Comparison Table with the headings:
 - i. Human-Generated Content
 - ii. AI-Generated Content

Human-Generated Content:

Will AI replace jobs or change them?

Nowadays, AI is growing very fast, and many people think it will take away jobs. But I think AI will not fully replace jobs, it will only change them. AI can do easy and repeated work like counting data or working on machines. This helps people save time and effort. Humans are still needed for thinking, creativity, and making decisions. Some jobs may end, but new jobs will also be created because of AI. People will need to learn new skills to get these jobs. Students should not be afraid of AI and should try to learn new things. If we use AI in the right way, it can make our work easier and help us in the future.

AI-Generated Content (by ChatGPT):

Artificial Intelligence is more likely to change jobs rather than completely replace them. While AI can easily handle repetitive, routine, and data-based tasks with high speed and accuracy, it cannot fully replace human creativity, emotional intelligence, ethical thinking, and complex decision-making. Instead of eliminating jobs, AI is transforming the way people work by acting as a supportive tool that improves productivity and efficiency. For example, in sectors such as healthcare, education, business, and engineering, AI helps professionals by analyzing large amounts of data, managing records, and offering useful insights, but human expertise is still required to make final decisions and handle sensitive situations. Moreover, AI is creating new job opportunities in fields like data science, artificial intelligence development, cybersecurity, and digital technology management. However, some traditional jobs may decrease, making it essential for workers to adapt by learning new skills. Overall, AI will reshape jobs, emphasizing the importance of flexibility, reskilling, and continuous learning rather than complete job replacement.
